Reuters (1 May 2018)

BAGHDAD (Reuters) - Iraq's crude oil exports from the southern ports, on the Gulf, averaged 3.340 million barrels per day (bpd) in April, lower than in March, because of maintenance works at loading terminals, two Iraqi oil executives said on Tuesday.

The March average was 3.45 million bpd. The export level dropped because of maintenance work carried out at loading terminals in early April.
