
ASSEMBLY OF WORLD'S LARGEST FUSION REACTOR BEGINS IN FRANCE

-

29.07.2020

Al Jazeera (28 July 2020)

Assembly of the world's largest nuclear fusion reactor has begun in Cadarache, south of France.

The International Thermonuclear Experimental Reactor (ITER) consortium is a joint effort by Japan, India, the European Union, the United States, Russia, China and South Korea.

ITER will be the first fusion device to produce net energy, maintain fusion for long periods of time and test the integrated technologies, materials, and physics regimes necessary for the commercial production of fusion-based electricity, according to the consortium.
