Iraqi News Agency (20 May 2021)

The Iraqi Authority for the Control of Radioactive Materials announced that the National Committee for Nuclear Reactors is studying 20 potential sites for establishing nuclear reactors in Iraq.

The head of the commission, Kamal Hussein Latif, said in a statement to "Al-Sabah" newspaper, which was followed by the Iraqi News Agency (INA), today, Thursday: that 20 initial sites have been identified so far, and then internationally approved scientific projection methods will be used to reduce them to 5 sites after that Determining only two of them, one is original and the other is an alternative, indicating that "the selection process was carried out in two accurate scientific ways through differential and weighting equations, the first is the" Kenny "method and the second is the" SITE "method or the singular value, and by using the ArcGis system, confirming near the completion of the report on choosing the site and to send it to the prime minister's office . "
