## **METSAMOR: THE WORLD'S MOST DANGEROUS NUCLEAR PLANT**

-

13.09.2021

---

Contreras Report - YouTube (11 September 2021)

Metsamor is Armenias substandard nuclear power plant 22 miles from Armenias capital, Yerevan.

It was built on a dangerous earthquake fault line. Two earthquakes hit Armenia on December 7, 1988, killing 60,000 people and destroying nearly half a million buildings. The two tremors, only minutes apart, were measured at 6.9 and 5.8 in magnitude. The epicentre of the first and more powerful earthquake was Spitak, a city only 46 miles away from Metsamor.

Metsamor remains the most dangerous nuclear plant in the world...
