Oil Price (27 November 2022)

Uzbekistan has inaugurated a new power plant that will add enough generating capacity to supply around 230,000 households, but even that will not be sufficient to solve the current electricity deficit crisis.

The power station built in the Khovos district of the Syrdaryo province was put into operation on November 20 and will be able to produce up to 1.7 billion kilowatt hours of electricity per year, the Energy Ministry said. The plant was built by Turkish company Cengiz Energy.

The Khovos plant was supposed to start working on October 25, but that date was pushed back.
