Trend News Agency (12 February 2024)

İngilab Mammadov

The minefield maps provided by Armenia are inaccurate, the Azerbaijan National Agency for Mine Action (ANAMA) told Trend.

Minefield maps, in accordance with ANAMA's technical requirements, detail reference locations, types, numbers, spacing, installation, and concealment methods. Nonetheless, the Armenian side's most recent submissions continue to display this information incorrectly and incompletely. After analyzing and processing these forms, it became clear that the information did not correspond to the actual minefields, rendering the coordinates of the reference sites erroneous and ineffectual.

The Armenian authorities handed Azerbaijan eight maps depicting minefields in Azerbaijani territory liberated from Armenian occupation. These publications mostly document minefields that encircle the Murovdag ridge in the Kalbajar region.
