
IAEA: IRAQ HAS ENTERED A NEW NUCLEAR ENERGY PHASE

- 05.04.2024

Iraqi News Agency (4 April 2024)

The International Atomic Energy Agency stated that Iraq has entered a new phase in the field of nuclear energy and the practice of its nuclear activity, while the Radiation Protection Center confirmed on Thursday that significant progress has been made in mitigating the effects of radioactive contamination.

"Nearly 43 years after the Zionist entity destroyed the first Iraqi nuclear reactor that was built, Iraq begins today a new phase in the field of nuclear energy and the practice of its nuclear activity for peaceful purposes with the support of the International Atomic Energy Agency, and work to develop a road map to develop Iraq's work, build infrastructure and access to nuclear technology in peaceful fields," said Rafael Grossi, the Director General of the International Atomic Energy Agency, in a post that was obtained by the Iraqi News Agency (INA) and cited by the Center for Radiation Protection.
