Alyona Pavlenko

The Middle Corridor is the most favorable route for transporting green ammonia from Kazakhstan to the European market, Ainur Tumysheva, Investment Director of the Hyrasya One project and regional representative of SVEVIND Energy in Kazakhstan, told Trend in an exclusive interview.

Tumysheva laid it all on the line about the Hyrasya One project, nestled in Kazakhstans Mangystau region. The plan is to roll up their sleeves and build a plant that will churn out green hydrogen, which will then be transformed into green ammonia for the long haul. The German-owned SVEVIND Energy Group is rolling up its sleeves and making strides, hitting several key milestones over the past year.
