*A delegation from the Nuclear Energy Agency under the Cabinet of Ministers of Uzbekistan (Uzatom), led by Director Azim Akhmedkhadjayev, visited the production facility of MVM EGI in Wuzhen Province and held high-level talks with Harbin Electric Corporation, one of China's largest energy equipment manufacturers, Trend reports, citing Uzatom.*

During the visit to MVM EGI – a company specializing in the production of heat exchangers for dry cooling systems – the delegation was introduced to the complete production cycle of heat exchange equipment. Established in 2009, the plant spans an area of 8,500 square meters and manufactures up to 7,000 heat exchanger assemblies annually. The equipment, originally transferred from a production site in Hungary, is known for its high quality, utilizing aluminum with optional stainless steel components for specific requirements. The operational lifespan of the heat exchangers exceeds 30 years.
