Trend News Agency (23 December 2025)

Madina Usmanova

Kazakhstans ERSAL Industrial Port, under the management of ERSAL Caspian Contractor, has initiated a dredging project at Kuryk Port aimed at enhancing the capacity of the Middle Corridor, Trend reports via the Kazakh Ministry of Transport.

The project aims to enhance the depth of the port and its access channel to 5 meters, thereby facilitating year-round navigation and supporting the growth of transit flows along the Middle Corridor.

ERSAL is fully financing the initiative, having invested in the construction of its proprietary Cutter Suction Dredger (CSD 650), named ERSAL 5. This strategic investment allows the company to retain complete control over project timelines, quality standards, and cost management. Dredging operations are planned to be executed between January and June 2026, with a total dredging volume of 1 million cubic meters.
