[South] Cyprus and Greece will develop AI-powered satellites to detect fires, earthquakes and floods, alongside border surveillance radars and defence technologies, under a space cooperation agreement signed recently.

The memorandum between the Hellenic Space Technology & Applications Industry Association and the [South] Cyprus Space Industry Association opens the door to potential collaboration with Israel and India on microsatellite technology, according to CSIA president Maria Constantinou.

The space sector partnership is exceptionally important, strengthens both countries and enhances their position globally whilst attracting international collaborations, Constantinou told Phileleftheros.
