
UZBEKISTAN EXPANDS SUPPORT MEASURES FOR THE GREEN ECONOMY AND WASTE MANAGEMENT SECTOR

-

05.01.2026

Uz Daily (4 January 2026)

Uzbekistan has adopted additional measures to support the green economy and the waste management sector.

On 30 December 2025, Presidential Decree No. UP-269, On Additional Measures to Guarantee the Supply of Certain Consumer Goods to the Population and to Further Support Selected Sectors of the Economy, was signed. The document aims to expand access to socially important goods, stimulate the development of key economic sectors, and create favorable conditions for the introduction of modern technologies, including in the fields of the green economy and waste processing.

Under the decree, based on lists compiled in accordance with established procedures, certain categories of goods imported into the country will be exempt from customs duties for a specified period starting from 1 January 2026. In particular, until 1 January 2028, a zero customs duty rate will apply to electric vehicle charging stations, their components, and technological equipment intended for the development of service infrastructure, as well as spare parts for silk processing and weaving equipment, mulberry seeds and seedlings, and super-elite, elite, and industrial silkworm seeds.
